Discourses of
Participation
in the Philippines'
Bottom-up Budgeting
(BUB)

Gladys Ann G. Rabacal University of Auckland 7 December 2016

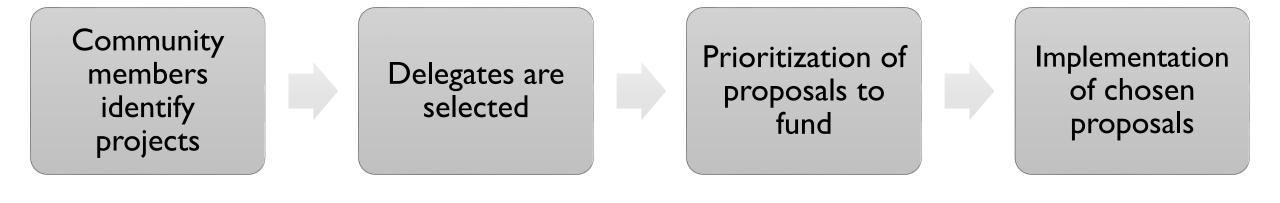

Overview

- I. Participatory approaches
- 2. Participatory budgeting
- 3. Research objectives and methodology
- 4. Key findings of case study
- 5. Conclusions and recommendations

Participatory approaches

- Prone to political marginalization, selection bias and political interference (Cooke & Kothari, 2001)
- Participatory spaces can never be a neutral ground;
 molded by power relations (Cornwall, 2002)
- Nevertheless, participatory practices remains to be a widely adopted governance practice

Participatory Budgeting

- Philippine BUB started in 2012
- To promote participatory planning and budgeting involving poor local communities
- Inspired by the CDD participatory processes

Objectives

- Solicit and analyse narratives of BUB participation, on both formal and informal spaces of participation
- Find out the extent to which these local engagement practices contribute to exclusionary or inclusionary decision making in local governance

Methodology

- Secondary data review
- Semi-structured interviews among government officials, civil society groups and community members

Community observations

BUB in Taytay

Civil Society Assembly

Local Poverty Reduction Action Team (LPRAT) meeting

Key findings: Formal sphere

- Participation through consultations and meetings
- Time-bound, selective and governmentfacilitated
- Foucault's
 governmentality (Dean
 2010) & "Rendering
 society technical" (Li, 2011)

There is participation, but it is limited

Consultation sessions are dominated by some sectors

Facilitator-driven

Key findings: Informal Sphere

- Informal spaces also pose a danger of being controlled
- It is within informal spaces that members exercise their agency as individuals capable of articulating their concerns (Hailey, 2001)
- Social capital & Governmentality at work

Tsismis, kwentuhan, pakikisalamuha Community dialogues/ outings Incentivizing

What did I do with these findings?

The Bibingka Approach

Formal Sphere (government-led)

ENVIRONMENT¹

- Laws
- BUB memoranda
- Executive orders & other policy issuances

PROCESS DESIGN²

- Elites, leaders & bureaucrats- driven; selected representatives in the assembly & meetings
- Formal program
- Time-bound
- Linkages among formal institutions

MECHANISM³

 Conduct of civil society assembly and formal discussions, tendency for sectors to be under or over represented

BOTTOM-UP BUDGETING PROGRAM

- Local / situated knowledge
- Local dynamics
 - **ENVIRONMENT**

- Initiated by community leaders, community organizers
- No selection processes, everyone is welcome
- Not costly, less political
- Government participation not mandated
 - **PROCESS DESIGN**

- Tsismis, pakikipagkwentuhan/ pakikisalamuha⁴ as symbols of many levels of interacting, social bonding, as sources of information
- Community meetings/ outings anchored on community-based perspective

MECHANISM

Informal Sphere (community-led)

¹ Local government context that affects citizen participation; ² Considerations that enable quality citizen participation; ³ Methods to gain broad participation (Ebdon & Franklin, 2006) ⁴ Gossip (loose translation), catch-up sessions/ socializing

Conclusions

- Participatory practices installed in the BUB process contribute to broadening participation albeit limited
- Participation is pliable
- Need to harness participation in both the formal and informal sphere

Policy Recommendations

- Program review might be needed in order to identify the flaws of the BUB that needs improvement (safeguards against pet projects, flexible project options)
- Treat BUB timeframe as guide and not as a limitation
- Social preparation (communities and implementers)
- Development communication strategies
